

ALMOST INVISIBLE

With no visible motor, the GHZero maximises lift height, and is also perfect for installations where minimum visual impact is a necessity.

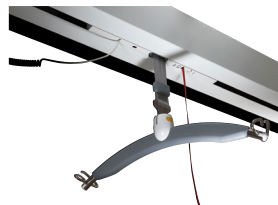

DESIGNERS DREAM

Multiple options for discrete integration. The spreader bar can be concealed in a cupboard, whilst the wall rails can integrate lights and accessories.

EASY TO USE

Mounted on low friction rollers, the GHZero is effortless to move, and has simple, intuitive hand controls for ease of use.

RELIABILITY

Based on proven hoist technology, the GHZero benefits from outstanding reliability, with an expected 15 year lifespan.

GHZERO CEILING HOIST

The invisible hoist

The GHZero is a revolution in hoist design providing the most discreet hoist system ever. The patented design conceals the complete hoist mechanism within the track meaning the system is virtually invisible. With a SWL of 255 kg (40 stone), the GHZero is also suitable for larger users.

The standard loop-type spreader bar is available in three sizes for adult and paediatric use. Unique wall mounted rails can be fitted to almost any substructure, including single skin plasterboard walls, without the need of additional structural support. By integrating the hoist mechanism into the track, lifting height is maximised, making the GHZero superbly suited to installations with low ceilings, such as converted garages.

Spanning up to 5 metres, the GHZero can be used in most environments, with the white powder coated tracks blending in effortlessly; for extra luxury and atmosphere, LED lights can be fitted in the track.
