

About the Venue

Anfield Stadium is one of the UK's most iconic sporting venues, welcoming tens of thousands of supporters on matchdays and hosting a wide range of events throughout the year. Building on Liverpool Football Club's ongoing commitment to accessibility and inclusion, the club identified the need to add a second fully compliant Changing Places facility to further support disabled fans and visitors with complex needs.

With high visitor numbers and increasing demand for accessible provision, the additional facility helps ensure that fans and visitors who rely on Changing Places toilets can attend events at Anfield with greater confidence, dignity, and comfort, supported by appropriate space, equipment, and layout.

The Challenge

Delivering a fully compliant Changing Places facility within a complex stadium environment

Installing a Changing Places facility within a live stadium environment presents a number of technical challenges. The space needed to meet strict Changing Places and Building Regulations requirements while integrating seamlessly into the existing structure of the stadium.

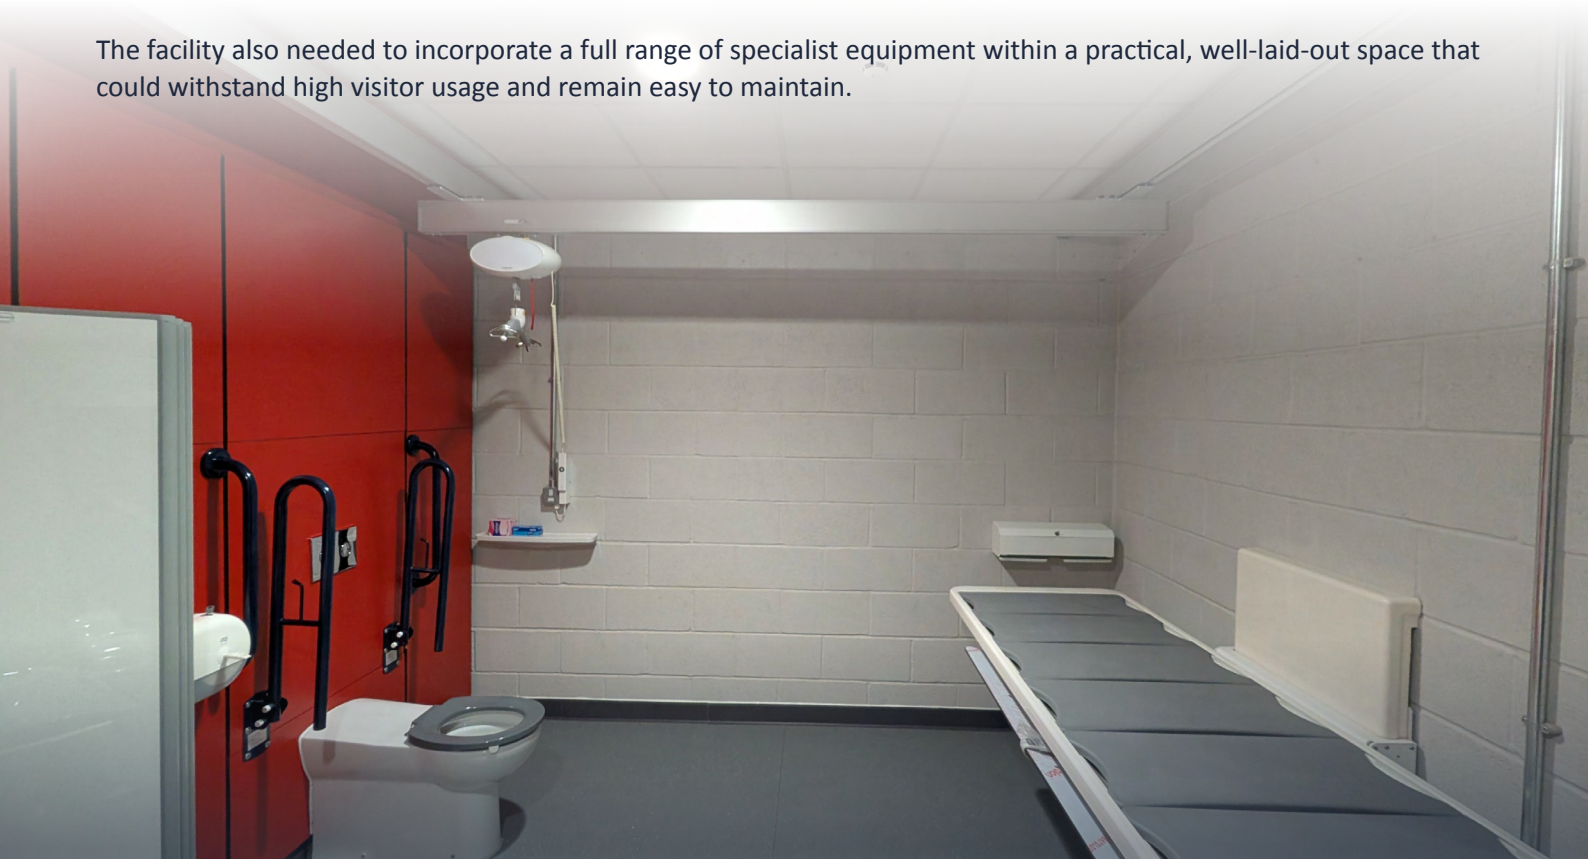

One key consideration was the ceiling construction and the services located above it. The project required a safe and reliable ceiling hoist solution without impacting or altering ceiling services, while still delivering smooth, secure transfers for users.

The facility also needed to incorporate a full range of specialist equipment within a practical, well-laid-out space that could withstand high visitor usage and remain easy to maintain.

Solution Highlights

- **Wall-mounted hoist brackets allowed ceiling hoisting without ceiling fixings**
- **Efficient installation with minimal disruption to the stadium**
- **Robust, easy-to-use equipment supporting dignity and independence**
- **Specialist design and installation delivered fully in-house by the Multicare team**

CASE STUDY

ANFIELD STADIUM LIVERPOOL FC CHANGING PLACES TOILET FACILITY

The Result

A safe, dignified, and fully compliant Changing Places facility

Multicare Medical delivered a complete 12sqm Changing Places installation at Anfield stadium, supporting users with complex needs while meeting all relevant guidance and standards.

The project began with a detailed site survey to assess the existing space, structural considerations, and service constraints, followed by a full room design produced using CAD drawings to ensure compliance, usability, and efficient use of space.

A Guldmann GH1 ceiling hoist system was installed using wall-mounted brackets, removing the need to fix tracking directly to the ceiling structure. This approach enabled safe, efficient installation without disruption to services above the ceiling, making it an ideal solution for complex stadium environments.

From installation through to commissioning, all works were completed by Multicare's in-house team, ensuring consistency, quality, and clear communication throughout. The finished space provides a robust, comfortable, and fully accessible environment that supports dignity, independence, and ease of use for visitors, carers, and support staff.

The new facility contributes to a more inclusive matchday experience, enabling more fans to enjoy live football at Anfield.

Equipment Provided

- Guldmann GH1 ceiling hoist system
- Select height-adjustable wash basin
- Ropox adult-sized height-adjustable wall mounted changing bench
- Wall mounted folding privacy screen
- Peninsular DocM toilet
- Full length mirror and all ancillary items
